

Tracing the growth of global community: A population forecasting analysis

Introduction

Overview:-

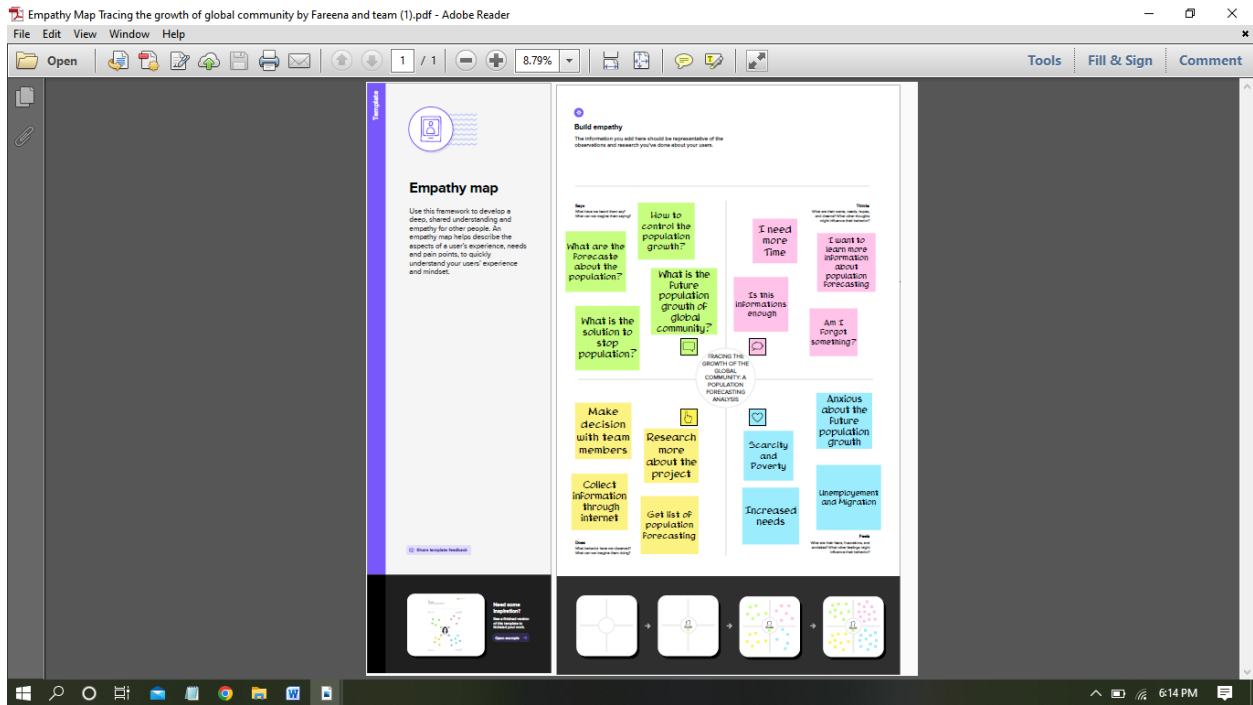

The world's population is more than 3 times larger than it was in the mid – twentieth century .The global human population reached 8.0 billion in mid – November 2022 from an estimated 2.5 billion people in 1950 ,adding 1 billion people since 2010 and 2 billion since 1998.The world's population is expected to increased by nearly 2 billion persons in the next 30 years , from the current 8 billion to 9.7 billion in 2050 and could peak at nearly 10.4 billion in the mid – 2080s. This dramatic growth has been driven largely by increasing numbers of people surviving to reproductive age, the gradual increase in human life span, increasing urbanization, and accelerating migration .Major changes in fertility rate have accompanied this growth .These trends will have far –reaching implications for generations to come. Population counts are important for governments in order to collect taxes and allocated the proper amount of funding to various infrastructure and social programs. Demography is the study of populations and their characteristics, and how these change over time and from place to place.

Purpose:-

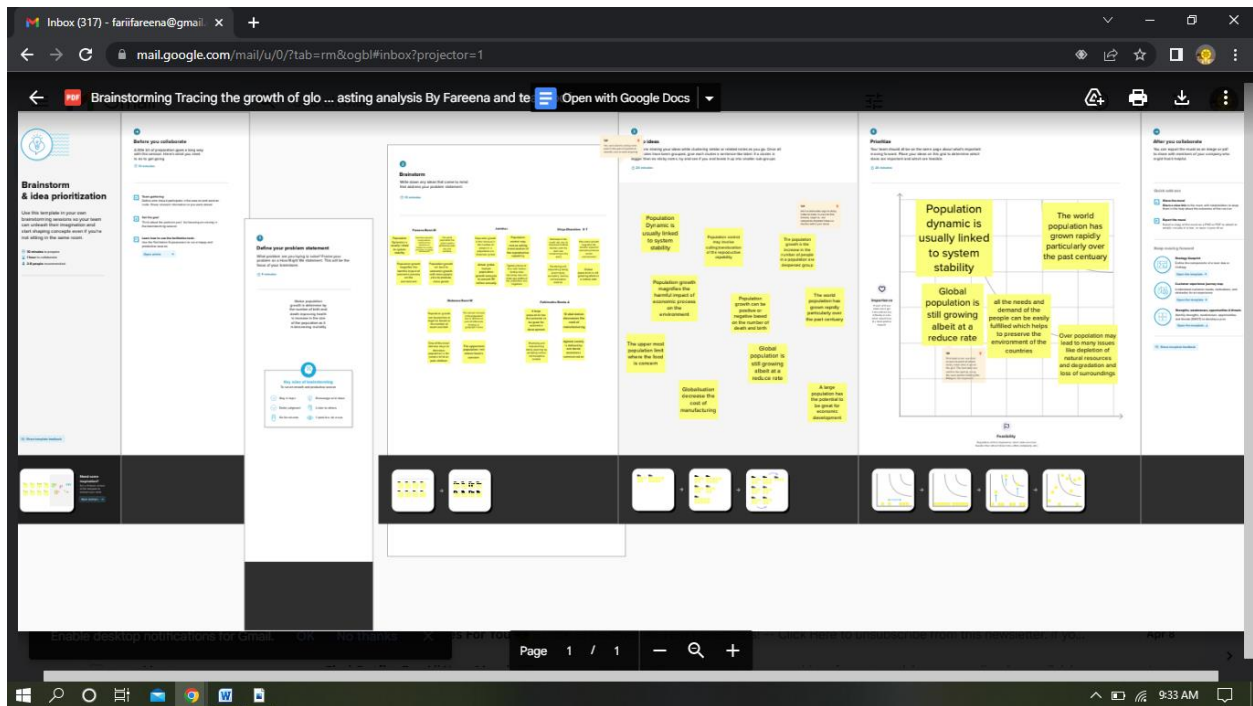

A population projection gives a picture of what the future size and structure of the population by sex and age might look like .It is based on knowledge of the past trends, and for the future ,on assumptions made for three components: fertility ,mortality and migration .

Story:

Advantages & Disadvantages

Advantages:-

Population growth will lead to economic expansion since more people can produce more goods.

More money will be available in tax revenue to fund public services like environmental and health care programs.

The improved demographic structure of society and economies of scale.

Disadvantages:-

As the population increases there will be more chances for the exploitation of natural resources.

Low per capita income and low quality of life.

The number of unproductive consumers is increasing and unemployment

Applications

Population growth will lead to economic growth with more people able to produce more goods.

There are some applications associated with population growth , including, human evaluation studies, the population growth helped to study and observe the advancements in both anatomy and physiology.

These includes economic benefits such as expansion of tax bases and increased consumers spending at local businesses.

Conclusion

The current population of India is around 140 cores . According to certain reports, in next few years, there will be a solid growth of population in India. The population is the total number of human beings living in a city or a country. Development does not just involve the biological and physical aspects, but also the cognitive and social aspects associated with the development throughout life.
